

Creating an Aesthetic Breast in Complex Breast Augmentation Surgery

with Professor Dennis von Heimburg

June 14 – 15, 2018

Overview

This interactive workshop is designed for plastic surgeons looking to achieve an aesthetic breast in various patient anatomies and in complex cases. Via a mix of live surgeries, didactic sessions and case discussions, course participants will learn implant selection techniques, proper patient measurement, and other methodologies for optimal results.

In order to foster scientific discourse and further the educational impact of the course, each participant is asked to prepare one slide with a complex case of their choosing; e.g. an unusual case, innovative technique or challenging condition. We plan to reference these cases during the days' discussion.

Delegate Criteria

Surgeons performing aesthetic breast augmentation, interested in learning safe and effective techniques for complex cases.

Program Overview

Day 1

4:00 p.m. Course commencement

- Implant selection
- Patient measurement
- Shape and product/clinical reports
- Difficult case discussion
