*14-15<sup>th</sup> February 2019*

## **Introduction**

The Uniportal Video Assisted Thoracic Surgery (VATS) is a well-established lung lobectomy technique. Originally designed by a Spanish team led by Dr. Gonzalez Rivas, it has now been extended to most Departments of Thoracic Surgery. Today, Uniportal VATS is still evolving to solve all the challenges that appear during the development of thoracic surgical procedures.

Tracheal surgery comprises a group of surgical interventions not well-known by thoracic surgeons, especially in the subglottic area. Only a few teams have enough experience to teach other colleagues to enter this amazing pathology.

We present this course as an opportunity to combine these different areas that concern to all thoracic surgeons.
