

Dear friends & colleagues,

We are happy to welcome you to be part of the seventh «Anecy Live Surgery International Shoulder Advanced Course» which will take place in Anecy from Thursday June 22 to Saturday June 24, 2017. Once again, we plane to organize 33 shoulder live surgeries.

Since the first edition in 2005 and towards the followings, the shoulder surgery has won acclaim and expanded in a significant way in the recent years. Improvement, research, evolution, research and emergence of new fields with new technologies for arthroscopy, arthroplasty and tendon transfer are making the shoulder field more and more important and exiting. Live case discussion and live surgery are the most transparent and updated tools for surgical indication and treatment. The aim of this course remains the same as the previous ones: A "live event" which shows through live surgery the new tips, tricks, technics and products, performed by the best shoulder surgeons in the world. The participants will not only see the most up-to-date shoulder surgery and management of challenging intraoperative problems, but they will also learn preoperative planning during the clinical case sessions: live discussion around some of the patients before their surgery. Now the new generation of talented surgeon is rising, they are ready to show their skill and new ideas too. The worldwide faculty is a mixed of all the generations.

I want to thank the wonderful international faculty of the best shoulder surgeons who accepted, once again, to come to Anecy to share with you their expert techniques, skill, and their passion for shoulder surgery!

I want to thank our commercial partners for their technical and financial contributions and their great participation! The aim of the meeting remains the same since the 1st edition: to show through 33 LIVE SURGERIES the most up-to-date techniques, to learn how to approach different situations and difficulties, all managed by the best experts and moderated by each other.

As in the 3 previous editions of the course, a permanent, simultaneous LIVE VIRTUAL 3D SHOULDER will help to better assess the anatomy and pathology being treated under the arthroscopic 2D image.

So welcome in Anecy to the seventh 'Woodstock' of shoulder surgery !

Amitiés  
Laurent Lafosse
